PERSONAL PROJECTS

Laravel Package

- Its function is to deal with site requests. It will give you the IP address of the person who visited the site, his city, the page he visited, and the type of his operating system in order to use it in making site analyzes such as knowing the countries used for your site, and it will send an alert to your email to take the appropriate action:

Cyber Technology (first laravel project)

- first project using laravel This is a site for a programming company with the use of the crud: [link](#)

Simple Blogger

- Simple Blogger U Can Add, Delete And Search Some Articles With Images : [link](#)

Search Engine (PHP)

- This is a simple search engine that was made using the TCP protocol. This search engine was designed using PHP, where the search engine communicates with the server through the server's IP and port, and the request is sent from the search engine to the server, so the server checks the request in the DNS and then sends accordingly response :[github](#)

INTERESTS

- Web Development
- Penetration Testing

REFERENCE

- References are available upon request
